# What is a Performance Model?

The Performance Model is a tool used to determine the fit between a candidate and a given position. The Model takes into account the abilities and perspectives that correspond to a good job fit and provides the ranges of various measures that are predictive of success in the position. An individual's assessment results can then be compared to the Model to gauge the fit between the person and the position.

The Model consists of a range of scores for the Thinking Style and Behavioral Traits scales where most of the successful performers in this position tend to fall. The farther outside this range (Performance Model) an individual's scores fall, the less likely the individual will fit the role.

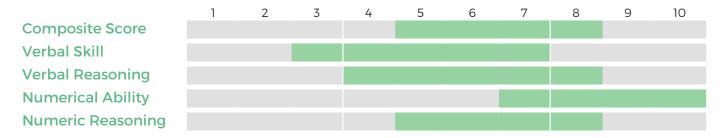

Interests for the Performance Model are based on the interests identified by those most successful in the position. The greater the degree of alignment between the individual's top three interests and the top three in the Performance Model, the more likely he or she is to find the job activities motivating and enjoyable, which could potentially keep him or her more engaged in the position.

# THINKING STYLE

A primary resource for learning is the ability to process information from one's environment. In most training situations, this information is in the form of either words or numbers. Each of the following scales measures an aspect of understanding words or numbers and using each as part of the reasoning process. They form the foundation for problem solving, communication, interaction, and learning skills used on the job.

### **Composite Score**

A reflection of overall learning, reasoning, and problem-solving potential

**Ideal Candidate:** Assimilates information with minimal confusion and can handle more complex information processing.

### Verbal Skill

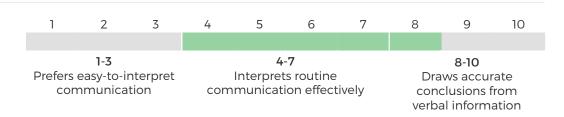

A measure of vocabulary

**Ideal Candidate:** Can process moderately complex language and has a vocabulary in the average range.

### **Verbal Reasoning**

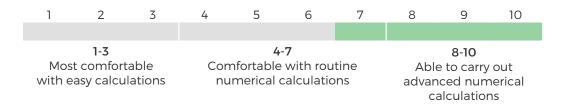

Using words for reasoning and problem solving

**Ideal Candidate**: Capable of analyzing and understanding the nuances contained in complex communication.

### **Numerical Ability**

A measure of numerical calculation ability

8

9

8-10

10
